

### Stretch Goal 1: evidence of using functions

[illegible]

Stretch Goal 2: Evidence of using Break Point to verify if I was coding in a memory efficient way

The screenshot shows the PyCharm IDE with a Python script open. The script is processing a file named 'hurdat2-1851-2023-051124.txt'. The current line of code being executed is line 63: `line = (str)'A011851', UNNAMED, 14,\n'`. The Debug console shows the evaluation of this line, with the result being a tuple: `('A011851', 'UNNAMED', '14,\n')`.
